

Dental X-ray Training Modules

Module 1: Tooth Identification & Image Orientation

- Identify image type (bitewing vs PA)
- Identify maxilla vs mandible
- Identify right vs left
- Identify region (anterior vs posterior)

Module 2: FMX & Bitewing Placement

- Place images into correct FMX template
- Identify bitewing type (R/L, premolar/molar)
- Detect incorrect placements

Module 3: Tooth-to-Chart Mapping

- Map radiograph to correct tooth
- Identify correct surface
- Select correct tooth on chart

Module 4: Normal Anatomy Recognition

- Identify normal structures
- Recognize restorations, crowns, implants
- Distinguish normal vs abnormal

Module 5: Radiographic Findings Recognition

- Detect caries, bone loss, radiolucencies
- Identify suspicious areas
- Mark tooth and surface

Module 6: Diagnosis Formation

- Convert findings into diagnosis
- Understand uncertainty
- Choose appropriate diagnosis

Module 7: Epic Documentation (Tooth Charting)

- Select correct tooth in Epic
- Select correct surface
- Enter diagnosis correctly
- Avoid wrong-tooth errors

Module 8: AI-Assisted Interpretation

- Student answers first
- AI shown after
- Compare and decide
- Learn when AI is wrong

Module 9: Integrated Case Simulations

- Full workflow from case to charting
- Includes AI comparison
- Realistic scenarios

Module 10: Adaptive Practice & Mastery

- Personalized cases
- Target weak areas
- Track progress
